

RESUME

hits 1

Introduce

- Name: Eunseop Shin
- Interesting area: Deep Learning, Model Compression, Machine Learning, Computer Vision, Cloud Computing
- Military Searvice: Not Yet (**Looking for a job as a Technical Research Personnel!**)
- Email: kairos9603@gmail.com
- GitHub: github.com/kairos03
- LinkedIn: linkedin.com/in/kairos03

학력

- Kyunghee University Graduate School, Computer Science and Engineering Dep, Attending(2020.03 ~ 2022.02(Expected Graduation Date))
- Kyunghee University, College of Electronic and Information, Computer Science and Engineering Dep, Graduated (2015.03 ~ 2020.02)
- Korea Digital Media High School, Hacking Defense Dep, Graduated (2012.03 ~ 2015.02)

경력

- KIST-Europe, Intern. (2017.09 ~ 2018.01)
- Kakao corp., Game business part A-TF Team. (2017.06 ~ 2017.07)

출판 논문

Global Weight: Network-level weight sharing for deep neural network compression

- Eunseop Shin, Sung-Ho Bae(Kyunghee Univ.)
- Korean Institute of Broadcast and Media Engineers, 2020 Summer Conference, Oral.
- In order to compress a large-sized deep neural network, we propose a global weight method, a network-level weight sharing method. The existing weight sharing method used to reuse and share weights for each layer and block. Unlike the existing method, Global Weight is an efficient method of sharing weights across the entire network.

A New Neural Architecture Search Using Self-Attention Operation

- Eunseop Shin, Sung-Ho Bae(Kyunghee Univ.)
- Korea Software Congress KSC2019, Undergraduate student poster.
- 기존의 DARTS는 매우 간단한 형태의 연산들만 후보로 갖고 있었다. Self-Attention연산은 사람이 찾은 모델에서 좋은 성능을 보였다. 이에 우리는 DARTS의 Search Space에 Self-Attention연산을 추가하여 새로운 Search Space를 구성하였다.
- [paper](#)

A New Deep Learning based Object Detection Method using a Deep Estimation Backbone Network Model

- Eunseop Shin, Seoungwoo Pyo, Sung-Ho Bae(Kyunghee Univ.)
- Korea Computer Congress KCC2019, Undergraduate student poster.
- Existing DARTS only had very simple operations as candidates. The self-attention operation showed good performance in the model found by humans. Therefore, we constructed a new search space by adding the Self-Attention calculation to the DARTS search space.

Monocular Image Depth Estimation using Synthetic Soccer Data based on Deep Neural Networks

- Eunseop Shin, Youmin Kim, Sung-Ho Bae(Kyunghee Univ.)
- Korea Software Congress KSC2018, Undergraduate student poster.
- Unlike the existing depth prediction, it is difficult to acquire data with a sense of depth in soccer images. To solve this problem, data was acquired from the FIFA game where it is easy to acquire data with a sense of depth, and the depth of the actual soccer image was more accurately predicted by performing style conversion between the real image and the virtual image.
- Best Paper Award(2nd)
- [paper](#) [poster](#)

Deep Learning Application of AuNP Interaction Analysis with Genetically Engineered FD-Viruses

- Moon-Hyeok Song, Eunseop Shin(Kyunghee Univ.),Yong Oh Lee, Jun Jo, Leon Abelman, Nuriye Zirpel(KIST-Europe)
- Korea Computer Congress KCC2018, Undergraduate student poster.
- YOLO v2, an ObjectDetection method based on DeepLearning, was used to simulate the interaction of gold nanoparticles and genetically engineered FD-virus.
- Best Paper Award(3rd)
- [paper](#)

Technology used

Deep Learning and Machine Learning

I can implement the latest deep learning technology, do my own research and improve performance.

- Python
- Pytorch(main)
- Tensorflow, keras(sub)
- Scikit-learn
- Data analysis(Pandas)
- Visualization(matplotlib)
- Learning logging(Tensorboard, sacred, neptune)

Web

I can build a simple prototype or create a web dashboard.

- Backend
 - Nodejs(koa, express)
 - Mysql, Mariadb, SQLite
 - Firebase
- Frontend
 - Nodejs(Vue.js, Vuetify)

Cloud Computing, DevOps

I can use Docker to Dockerize and deploy services, and I have more than 1 year of experience in building and operating Kubernetes clusters.

- Docker
- Kubernetes
- Ansible
- AWS
- GCP

Process

- Monitoring - prometheus, kibana, sentry
- Communication - slack
- Issue Tracking - Github
- CI/CD - TravisCI, CircleCI, Jenkins
- Version Control - Git, GitFlow

TODO

Learn new things and strive to be the best and first.

I think it is the developer who has to constantly study.

Currently, I am studying the following things.

- DeepLearning(Kwoege Distillation, Efficient Model Design)
- Hybrid cloud

Project

Project Ocean

- Intro: GPU cloud service for deep learning in the lab
- Date: 2020.02 ~
- Position: Kyunghee University MLVC Lab Master student, Infrastructure Team Leader.
- Role: kubernetes cluster DevOps, gpu instance and job submit Web Application DevOps.
- Related Tech: Kubernetes, Docker, nodejs, express, vue, firebase, ansible, nfs.

PCB design error detection using deep learning

- Intro: Developing a model that detects and detects PCB board design errors before making them in the factory.
- Date: 2019.04 ~ 2019.12
- Position: Kyunghee University MLVC Lab, Undergraduate research student.
- Role: Data analysis, Model training, REST API and C++ library development for interworking with existing programs, Development report writing.
- Related Tech: Classification(Resnet), Django.

Deep learning application of gold nanoparticles and genetically engineered FD-virus interaction analysis

- Intro: To analyze the interaction between gold nanoparticles and genetically engineered FD-virus, the simulation was analyzed with ObjectDetection model.
- Date: 2017.09 ~ 2018.01
- Position: KIST-Europe SmartConvergenceTeam, Intern.
- Role: Simulation data labeling, ObjectDetection Model (YOLO v2) implementation and training, paper writing.
- Related Tech: ObjectDetection(YOLO v2).

Twenty Go Quiz Games (for AI Speaker)

- Intro: Twenty-Go Quiz Game development for Kakao i artificial intelligence speaker.
- Date: 2017.06 ~ 2017.07
- Position: Kakao corp., Game business part A-TF Team.
- Role: Twenty-Go Quiz Data collection and processing. Machine learning model training, inference endpoint development.
- Related Tech: Data Crawling(Selenium, BeautifulSoup), Machine learning(scikit-learn), MySQL, Flask.

Open source contribution

Ocean

- Personal Project
- on-premis GPU cloud service for deep learning
- [GitHub](#) (To be disclosed)

Kairos-smi

- Personal Project
- Multi-Node nvidia-GPU Monitoring CLI
- CircleCI, pypi package.
- [GitHub](#)

Openstack

- I18n Participation in Translation
- openstack-i18n Typo correction [Commit](#)
- Openstack-kr Upstream Participation in the event(2017)
